Photo Information: Paul Jordan, left, and Jarey Schlabach receive Control4 Certified Installer Awards

Schlabach Security and Sound has just completed training to install the Control4 home automation system in homes and businesses in this region of Florida. Control4 gives simple, practical control of music, movies, lights, temperature and security systems from anywhere in the home, office, or anywhere in the world.

Control4 uses a simple system remote and on screen display to start a movie, dim the lights, and adjust the temperature for a true movie theater experience in the home. Control4 products can be easily installed in both new and existing homes. This means that the homeowner won't need to tear open walls and remodel the entire home to install a whole house control system. Complete Control4 systems can be installed in a matter of hours.

Jarey Schlabach, President of Schlabach Security and Sound, Inc. and Paul Jordan, Schlabach's technical support lead spent a week in Charlotte, North Carolina becoming certified as Control4 technicians. The installations are to exacting standards and the training allows a precision install every time, even with the variables found in every remodel project.

"This is the control system that our clients have been waiting for," stated Jarey Schlabach. "One controller is the heart of the system. It is easy to use, easy to install, and is affordable." Paul Jordan agrees, "The client can add a CD or DVD to the system or change temperature settings without having to call tech support. The onscreen display is a large, elegant interface and is simple to follow logically."

"You can start small and build your system over time," adds Schlabach, "When you want to do more in your home, we just add a few more pieces. We can even send music wirelessly to any room in the home." Jarey enthusiastically adds, "Clients really like the "ALL OFF" button. One touch and you can shut lighting and other systems down for the night. The system also allows you to manage your home, make the lights come on and off as needed, and easily set the temperature to go up and come down as you prefer."

"Don't forget energy savings!" Jim Loos, Schlabach Operations Manager, chimed in. "You can set the light to automatically come on at 90% brightness, for example. You won't notice the decrease in light, but will save 10% on energy cost and double the life of your light bulbs. You can still turn the light up to 100% as needed." Control4 can significantly reduce your energy consumption without compromising your lifestyle by using dimmers, timers, and occupancy sensors to reduce energy waste. The Energy Conservation Enhancement Project at LSU (Louisiana State University) has published studies suggesting that 20% of all electricity produced in the United States is used for lighting but 50% is wasted by inefficient lighting sources or careless consumers.

With ten employees, the Schlabach team has been growing steadily and has earned a reputation as cutting edge home entertainment and automation specialist in the Citrus County community. Schlabach Security can be reached in Lecanto at 352-527-3201. Their website is www.ssonline.biz and has much information that will give ideas for your home.
